EDUCATION

Satreesiriket School | GPAX 3.23

Math-English

Ubon Ratchathani University | GPAX 3.43 | Second-Class Honors

Bachelor of Science (Data Science and Software Innovation)

WORK EXPERIENCE

Entronica Co., Ltd

November 2023 - March 2024

Front-end Developer (Cooperative Education)

EnterLand (Internal Community Website)

1. Developed a user-search interface for the internal community platform, enabling users to quickly find and view people who interacted with posts.
2. Developed a reusable **Next.js** bottom-sheet component for interactive comment viewing, handling user interactions and providing a consistent UI pattern across the community platform.

Entronica Co., Ltd

May 2024-Present

Software Developer (Outsource AIS Employee)

ICreator (Internal Policy Rule Engine Web UI)

Tech Stack : VueJs · TailwindCSS · TypeScript · Vuexy · Pinia · NestJs · PostgreSQL · SwaggerUI

FrontEnd

1. Developed and delivered three policy-management modules—Product Offering, Customer-Facing Service (CFS), and Policy Set—from scratch, implementing reusable search, filtering, pagination, detail views, and data export workflows
2. Configured role-based UI authorization to protect routes and conditionally render menus and buttons based on user roles (Owner vs. others), using Vue Router guards and CASL
3. Resolved recurring date format issues across table views, detail pages, and display – standardized format from API responses

BackEnd

1. Designed and maintained the backend policy engine for managing rule sets, conditions, actions, events, and policy variables, supporting dynamic rule configuration across multiple policy workflows.
2. Integrated dropdown and option APIs for Policy Action, Value, Variable, and Operator to support dynamic frontend forms.
3. Resolved numerous production bugs in the export/import system including incorrect file generation, broken filter mappings

Support and Maintenance

1. Supported production data migration workflows by managing migration jobs, resubmitting failed requests, and updating migration schedules to ensure policy data was processed correctly.
2. Executed and validated SQL scripts for production data operations, including record creation, updates, and deletion based on migration and policy-management requirements.

AIS Order Web Portal

Tech Stack : Next.js App Router · TypeScript · TypeScript · MUI 7 · React · TanStack Table

FrontEnd

1. Bootstrapped a new **Next.js** order portal from a legacy web application, integrating Vuexy, MUI 7, and Tailwind CSS while establishing reusable vertical and horizontal navigation patterns.
2. Developed reusable data-table infrastructure supporting column ordering, field selection, and configurable data export, including synchronized column selection between the table and export dialog.
3. Built Post-Test tool – form with header rows, site selection logic, dropdown data, query generation, audit trail integration

AIS BackEnd microservice

Tech Stack : Java 17 · Spring Boot · REST API · JUnit 5 · Grafana

BackEnd

1. Implemented reconnect eligibility validation for bundling packages and Debt/Fraud business rules, preventing ineligible requests from entering the reconnect workflow.
2. Implemented inbound and outbound API monitoring in **Grafana**, tracking RPS, success/failure rates, and P50, P90, and P99 response-time percentiles to improve service observability.
3. Used AI to generate and refine unit tests for Spring Boot services, covering different scenarios and edge cases to improve code quality and test coverage.

PROJECT

HaanKan (Subscription Sharing Web Application . Bachelor's Final Project, Data Science & Software Innovation)

Tech Stack : Python · Django · MySQL · WebSockets · Docker · HTML/CSS/JavaScript

1. Developed a subscription-sharing platform that enables users to create and join groups (“Parties”) to split the cost of shared Netflix, Spotify, and other app subscriptions.
2. Implemented real-time group chat using Django Channels and WebSockets, enabling participants to communicate within subscription-sharing groups.
3. Implemented payment tracking with QR-code uploads, masked bank-account information, and payment-evidence submission to support secure subscription cost sharing.
4. Containerized the application using **Docker Compose** with **MySQL 8.0** and Adminer for database management

Air4m – AQI Notification & Todo Reminder Web Application

Tech Stack : Next.js · MUI · TypeScript · Spring Boot · Java · PostgreSQL · LINE Messaging API

1. Developed an end-to-end AQI monitoring and task-management platform, integrating WAQI and WeatherAPI to provide real-time air-quality and weather data.
2. Built **Spring Boot REST APIs** that classify AQI into six severity levels, generate Thai health recommendations, and trigger automated LINE notifications based on air-quality conditions.
3. Developed the **Next.js** frontend with MUI DataGrid, server-side pagination, task creation, autocomplete search, DateTimePicker, and form validation.
